

CT Chest/Abdomen/Pelvis with Contrast — Follow-up

Radiology Report

Patient ID: P001
DOB: 1972-05-14
Sex: M
Accession: ACC-CT-2025-0910-001
Study Date: 2025-09-10
Modality: CT
Referrer: Oncology, LMU
Report ID: RPT-CT-P001-0910
Generated: 2025-09-20T20:25:30Z

Indication

Response assessment after 6 weeks of ADT.

Technique

Helical CT from lung apices to symphysis after IV contrast (100 mL).

Findings

Lungs: No suspicious nodules.

Abdomen: Organs without focal suspicious lesions.

Lymph nodes: Right external iliac node increased in size (now 16 mm short-axis).

Measurements

Lesion	Location	Longest diam (mm)	Prior (mm)
LN-1	Right external iliac	16	12

Impression

Interval increase of right external iliac lymph node to 16 mm short-axis (from 12 mm). No new visceral lesions. Overall: Radiologic progression in nodal disease.
